Research Objective
Improve the robustness, stability, and efficiency of dynamic graph networks operating under three conditions, while satisfying four requirements
Condition 1
Adversarial Environment
Condition 2
Non-stationary Conditions
Condition 3
Distributed Network Dynamics
Four Requirements
R1: Robustness
R2: Accuracy
R3: Efficiency
R4: Privacy
Four Requirements
Adversarial Environment
Non-stationary Conditions
Distributed Dynamics
R1: Robustness
CT-TGNN
MambaShield

FedLLM-API
Certification
Seven Developed Methods
M1: CT-TGNN — continuous-time temporal graph dynamics
M2: FedLLM-API — federated graph optimization with privacy
M3: TripleE-TGNN — multi-level temporal graph embeddings
M4: MambaShield — state-space online adaptation
M5: Stoch. Transformer
M6: UC-HGP
M7: Certification
M7: FedLLM-API
