

RESEARCH OBJECTIVE

Improve the robustness, stability, and efficiency of dynamic graph networks operating under **three conditions**, while satisfying **four requirements**

All 12 condition–requirement intersections are covered by M1–M7

APPLICATION DOMAIN (CHAPTER 3):

Network Security • Healthcare • Finance • Autonomous Systems • Agriculture

DEVELOPED METHODS (M1–M7)

- M1: CT-TGNN** (Neural ODE)
- M2: FedLLM-API** (Federated)
- M3: TripleE-TGNN** (Multi-level)
- M4: MambaShield** (SSM)
- M5: Stoch. Transformer** (Uncertainty)
- M6: UC-HGP** (Bayesian)
- M7: FedGTD Cert.** (Robustness Certification)
